Education

University of Toronto

Master of Information (User Experience Design)

2025 - 2027

Queen's University

Bachelor of Computing with 16-month Professional Internship

2020 - 2025

Relevant Experience

UX Researcher and Logistics Coordinator

Canada Super Collectables

February 2026 – Current

- Synthesize data from multiple social media sources totalling 20k+ followers to understand target audience and key demographics to find actionable recommendations and concepts
- Boosted company email click-through rate by 188% across an 8,000+ subscription list by refactoring email layouts using UI/UX best practices, integrating clear visual hierarchy, and prominent CTA placement
- Re-architected the business website using WordPress Gutenberg, applying UX/UI heuristics and comparative analysis to eliminate usability friction and align with modern design paradigms

Frontend Developer Intern

NB Power Nuclear – Point Lepreau

September 2023 – December 2024

- Led front-end modernization of 14 legacy applications using JavaScript, HTML/CSS, SQL, JSON, and AJAX focusing on responsive design and user experience
- Implemented SQL database architecture for controlled document management system, handling 10,000+ nuclear procedure documents
- Implemented performance optimizations and UI/UX improvements across 22 company products
- Built custom REST API endpoints handling 100+ daily requests for real-time data visualization

Database and Web Developer

January 2025-April 2025

Queens University – Dan School of Drama and Music

- Engineered an interactive web application for Queen's University's theatrical production using HTML5, CSS3, JavaScript, PHP, and MySQL
- Developed a custom randomization algorithm using PHP that preserved structural integrity across 7 acts and 60 scenes while dynamically generating new scene orders daily
- Engineered specialized print functionality with custom-styled output, integrated download capabilities, and interactive pie chart visualizations to display scene distribution data for audience engagement

VR Software Developer

University of New Brunswick Human-Computer Interaction Lab

July 2024 – November 2024

- Developed interactive UI components using React to display VR environment data
- Implemented C++ functionality to automatically populate panel slides from stored folder structures
- Optimized application performance using C++, with application running at 250 FPS (4ms per frame)
- Built API endpoints to facilitate automatic extraction and integration of local folder data
- Manage project timelines and deliverables independently throughout a period of 5 months while communicating effectively with supervising professor

Certification

Google

UX Design Specialization

2023

Canadian Panel on Reach Ethics

TCPS 2: CORE-2022

2025

Technical Skills

- IDEs and Tools: Figma, Canva, MySQL, jQuery, Open Text Content Server, Inkscape, Appsmith
- Experience with UI/UX, User Research, Event Logistics, Software Development, Prompt Engineering
